

"The best meeting I've ever attended!"

There is a continued demand to offer healthcare professionals the opportunity to assess and improve their skill in the diagnosis and treatment of diseases. The David Ellenbogen Center for Health Sciences Education offer the health science practitioner seminars in an intimate setting with didactic and hands-on sessions designed to meet your needs.

Our 13,000 square foot Health Sciences Education Center is designed for quality education services led by field experts. The curriculum will offer participants an opportunity to actively take part in each session, utilizing the most advanced tools available on the market today. Courses ranging from breast imaging and intervention to advanced bone densitometry techniques are provided. Our curriculum continues to grow and expand as we meet the growing need for quality education.

for Health Sciences Education

The David Ellenbogen Center
for Health Sciences Education

RT Seminars & Workshops 2009

Next Level in Stereotactic Breast Biopsy

Digital Mammography -
Impact on Clinical Practice

DXA Imaging - Analysis and More

The seminars and workshops at the David Ellenbogen Center for Health Sciences Education are made possible by an educational grant from HOLOGIC.

Next Level in Stereotactic Breast Biopsy

► **May 29, 2009, August 28, 2009**

SEMINAR OVERVIEW

Exceptional one-day seminar with didactic and hands-on instruction for technologists performing stereotactic breast biopsy on Hologic systems. Course topics include positioning, digital image formation and the intricacies of exposure, image quality and manipulation.

ABOUT THE FACULTY

This successful program consists of a dedicated and highly experienced group of Hologic experts from clinical applications and product management. Each faculty member offers over 25 years of clinical experience in the fields of mammography, radiology and stereography. Their extensive knowledge in breast imaging and intervention is what continues to make this course a success.

Kelly Farmer, RT R M
Sharon Doherty, RT R M
Kathleen Houk-Hoffman, RT R M
Cherie Kilgannon, RT R M

GENERAL SESSION

Stereotactic Imaging Principles
 Stereotactic Problem Solving
 Understanding Targeting Issues
 Breast Positioning
 Breast Biopsy Devices

BREAK OUT SESSION

Using Digital Imaging to its Full Advantage
 Stereotactic Procedural Analysis
 Methods for System Testing Including ACR

TUITION

Technologist Fee \$195.00 includes all course materials, comprehensive syllabus, breakfast, lunch, and parking

This program has been awarded 8.0 hours of ARRT Category A credit by the ASRT.

“Answered all my questions before I could even ask them.”

Digital Mammography – Impact on Clinical Practice

► **April 16-17, 2009, October 22-23, 2009**

SEMINAR OVERVIEW

Our outstanding one and one-half day seminar explores a range of digital mammography topics with case review, hands-on positioning and workstation workshops for technologists working with or preparing for digital mammography.

ABOUT THE FACULTY

With a commitment to the earliest detection of breast cancer, each faculty member brings their dedication and passion to educating mammographers in the latest imaging technology. Their extensive knowledge offers each participant an opportunity to improve their understanding of digital imaging, its future and current applications.

Andrew Smith, Ph. D.
Kathleen Pickett, RT R M
Tammy Coryell, RT R M
Brenda Hunkins, RT R M
Kathleen Willison, RT R M

“Every technologist needs to attend if going digital!”

GENERAL SESSION DAY ONE

New Comfort Level with Digital
 Digital, Your Second Language
 Principles in Detector Technologies
 Image Formation, Display & Troubleshooting
 Digital Mammography Workflow
 Emerging Technologies

GENERAL SESSION DAY TWO

Digital Mammography CAD
 Positioning in Digital Mammography
 Case Review

BREAK OUT SESSION DAY TWO

Workstation Tools
 Positioning Labs with Models

TUITION

Technologist Fee \$250.00 includes all course materials, comprehensive syllabus, breakfast, lunch (day one only), and parking

This program has been awarded a total of 14.5 hours of ARRT Category A credit by the ASRT.

DXA Imaging, Analysis and More

► **May 8, 2009, September 18, 2009**

SEMINAR OVERVIEW

A new one day seminar providing didactic and expanded hands-on instruction for technologists and operators performing bone densitometry procedures. Course topics will include a positioning case review, understanding your reimbursement potential and factors affecting a good DXA scan. Hands-on sessions will include in-depth image analysis of the spine, hip and forearm cases for comparison, rate of change and challenging anatomy utilizing Discovery workstations.

ABOUT THE FACULTY

Each faculty member brings their dedication and passion to educating bone densitometry operators. Their extensive knowledge offers each participant an opportunity to improve their understanding of the why and how of bone health assessment, its future and current applications.

Lawrence Mowat, RT R BD CDT QM
Nancy Fagan, RT R M BD CDT
Susan Clark, RT R M
Mary Jane Paasche, RT R
Sara Davis, National Manager, Managed Care

GENERAL SESSION

Using your Software Beyond BMD
 Understanding your Reimbursement Potential
 Advanced Analysis & Positioning of the Spine and Hip
 Positioning Case Review

BREAK OUT SESSION

Expanded Image Analysis
 What May Affect a Good DXA scan?
 Comparison Analysis and Rate of Change in Bone Density

TUITION

Technologist Fee \$195.00 includes all course materials, comprehensive syllabus, breakfast, lunch, and parking

This program has been awarded a total of 8.0 hours of ARRT Category A credits by the ASRT.

“Great hands-on analysis”
