

Customer Letter - Fischer Senoscan

Dear R2 ImageChecker Customer:

Our records indicate that you own an R2 ImageChecker CAD system for your Fischer Senoscan FFDM system. This letter is to inform you that Hologic has decided to no longer make algorithm improvements for Fischer Senoscan as it is no longer manufactured by Fischer. We are sorry for any inconvenience that this may cause.

Hologic provides the latest R2 ImageChecker CAD algorithms, with a wide range of new features for most FFDM systems. If you have already transitioned your practice from Fischer Senoscan, or plan to do so in the near future, please contact your local Hologic account representative for information on R2 ImageChecker CAD and Hologic Selenia systems. If you are not sure who your local representative is, please call the R2 Technical Assistance Center at 866-CHECKED (866-243-2533) at 6am-5pm PST.

For our customers under Hologic service agreement, we will continue to provide service and support for your existing unit in its current configuration for as long as parts are available.

We are excited about the opportunity of providing you and your colleagues with the latest software available. Our sales and service teams would be pleased to answer any questions you may have.

Thank you for letting us help you in the early detection of breast cancer; we greatly appreciate being part of your team in the fight against this deadly disease.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Sibel Narin', with a long horizontal flourish extending to the right.

Sibel Narin, DDS, MBA
Product Manager
Hologic, Inc.
