SECURITY CAPABILITIES

Refer to Section 2.3.2 of this standard for the proper interpretation of information requested in this form.

1 AUTOMATIC LOGOFF (ALOF)

The device’s ability to prevent access and misuse by unauthorized users if device is left idle for a period of time.

1-1 Can the device be configured to force reauthorization of logged-in user(s) after a predetermined length of inactivity (e.g., auto-logoff, session lock, password protected screen saver)?

1-1.1 Is the length of inactivity time before auto-logoff/session lock user or administrator configurable? (Indicate time [fixed or configurable range] in notes.)

1-1.2 Can auto-logoff/session lock be manually invoked (e.g., via a shortcut key or proximity sensor, etc.) by the user?

2 AUDIT CONTROLS (AUDT)

The ability to reliably audit activity on the device.

2-1 Can the medical device create an audit trail?

2-2 Indicate which of the following events are recorded in the audit log:

2-2.1 Login/logout

2-2.2 Display/presentation of data

2-2.3 Creation/modification/deletion of data

2-2.4 Import/export of data from removable media

2-2.5 Receipt/transmission of data from/to external (e.g., network) connection

2-2.5.1 Remote service activity

2-2.6 Other events? (describe in the notes section)

2-3 Indicate what information is used to identify individual events recorded in the audit log:

2-3.1 User ID

2-3.2 Date/time

3 AUTHORIZATION (AUTH)

The ability of the device to determine the authorization of users.

3-1 Can the device prevent access to unauthorized users through user login requirements or other mechanism?

3-2 Can users be assigned different privilege levels within an application based on ‘roles’ (e.g., guests, regular users, power users, administrators, etc.)?

3-3 Can the device owner/operator obtain unrestricted administrative privileges (e.g., access operating system or application via local root or admin account)?

© Copyright 2013 by the National Electrical Manufacturers Association and the Healthcare Information and Management Systems Society.
4. **CONFIGURATION OF SECURITY FEATURES (CNFS)**
   The ability to configure/re-configure device security capabilities to meet users’ needs.
   
   4-1. Can the device owner/operator reconfigure product security capabilities?  
   
   CNFS notes:
   1) Yes, after validation by Hologic

5. **CYBER SECURITY PRODUCT UPGRADES (CSUP)**
   The ability of on-site service staff, remote service staff, or authorized customer staff to install/upgrade device’s security patches.
   
   5-1. Can relevant OS and device security patches be applied to the device as they become available?  
   
   CSUP notes:
   1) Yes, after validation by Hologic

6. **HEALTH DATA DE-IDENTIFICATION (DIDT)**
   The ability of the device to directly remove information that allows identification of a person.
   
   6-1. Does the device provide an integral capability to de-identify private data?  
   
   DIDT notes:
   1) When data is exported.

7. **DATA BACKUP AND DISASTER RECOVERY (DTBK)**
   The ability to recover after damage or destruction of device data, hardware, or software.
   
   7-1. Does the device have an integral data backup capability (i.e., backup to remote storage or removable media such as tape, disk)?
   
   DTKB notes:
   Yes

8. **EMERGENCY ACCESS (EMAG)**
   The ability of device users to access private data in case of an emergency situation that requires immediate access to stored private data.
   
   8-1. Does the device incorporate an emergency access (“break-glass”) feature?  
   
   EMAG notes:
   1) ADMIN account

9. **HEALTH DATA INTEGRITY AND AUTHENTICITY (IGAU)**
   How the device ensures that data processed by the device has not been altered or destroyed in an unauthorized manner and is from the originator.
   
   9-1. Does the device ensure the integrity of stored data with implicit or explicit error detection/correction technology?  
   
   IGAU notes:
   1) Audit log records changes

## 10  MALWARE DETECTION/PROTECTION (MLDP)

The ability of the device to effectively prevent, detect and remove malicious software (malware).

<table>
<thead>
<tr>
<th>10-1</th>
<th>Does the device support the use of anti-malware software (or other anti-malware mechanism)?</th>
<th>Yes</th>
<th>__</th>
</tr>
</thead>
<tbody>
<tr>
<td>10-1.1</td>
<td>Can the user independently re-configure anti-malware settings?</td>
<td>See Note 1</td>
<td>___</td>
</tr>
<tr>
<td>10-1.2</td>
<td>Does notification of malware detection occur in the device user interface?</td>
<td>No</td>
<td>__</td>
</tr>
<tr>
<td>10-1.3</td>
<td>Can only manufacturer-authorized persons repair systems when malware has been detected?</td>
<td>Yes</td>
<td>__</td>
</tr>
</tbody>
</table>

| 10-2 | Can the device owner install or update anti-virus software?                                         | Yes | __ |
| 10-3 | Can the device owner/operator (technically/physically) update virus definitions on manufacturer-installed anti-virus software? | See Note 1 | ___ |

MLDP notes:

1) Yes, after validation by Hologic

## 11  NODE AUTHENTICATION (NAUT)

The ability of the device to authenticate communication partners/nodes.

| 11-1 | Does the device provide/support any means of node authentication that assures both the sender and the recipient of data are known to each other and are authorized to receive transferred information? | Yes | __ |

NAUT notes:

## 12  PERSON AUTHENTICATION (PAUT)

Ability of the device to authenticate users

| 12-1 | Does the device support user/operator-specific username(s) and password(s) for at least one user? | Yes | __ |
| 12-1.1 | Does the device support unique user/operator-specific IDs and passwords for multiple users? | Yes | __ |
| 12-2 | Can the device be configured to authenticate users through an external authentication service (e.g., MS Active Directory, NDS, LDAP, etc.)? | Yes | __ |
| 12-3 | Can the device be configured to lock out a user after a certain number of unsuccessful login attempts? | Yes | __ |
| 12-4 | Can default passwords be changed at/prior to installation? | Yes | __ |
| 12-5 | Are any shared user IDs used in this system? | Yes | __ |
| 12-6 | Can the device be configured to enforce creation of user account passwords that meet established complexity rules? | Yes | __ |
| 12-7 | Can the device be configured so that account passwords expire periodically? | Yes | __ |

PAUT notes:

1) Service Account

## 13  PHYSICAL LOCKS (PLOK)

Physical locks can prevent unauthorized users with physical access to the device from compromising the integrity and confidentiality of private data stored on the device or on removable media.

| 13-1 | Are all device components maintaining private data (other than removable media) physically secure (i.e., cannot remove without tools)? | Yes | __ |

PLOK notes:

© Copyright 2013 by the National Electrical Manufacturers Association and the Healthcare Information and Management Systems Society.
14 ROADMAP FOR THIRD PARTY COMPONENTS IN DEVICE LIFE CYCLE (RDMP)
Manufacturer's plans for security support of 3rd party components within device life cycle.
14-1 In the notes section, list the provided or required (separately purchased and/or delivered) operating system(s) - including version number(s).
14-2 Is a list of other third party applications provided by the manufacturer available?
   1) Windows 7 2) Upon request

RDMP notes:

15 SYSTEM AND APPLICATION HARDENING (SAHD)
The device's resistance to cyber attacks and malware.
15-1 Does the device employ any hardening measures? Please indicate in the notes the level of conformance to any industry-recognized hardening standards.
   No __
15-2 Does the device employ any mechanism (e.g., release-specific hash key, checksums, etc.) to ensure the installed program/update is the manufacturer-authorized program or software update?
   Yes __
15-3 Does the device have external communication capability (e.g., network, modem, etc.)?
   Yes __
15-4 Does the file system allow the implementation of file-level access controls (e.g., New Technology File System (NTFS) for MS Windows platforms)?
   Yes __
15-5 Are all accounts which are not required for the intended use of the device disabled or deleted, for both users and applications?
   Yes __
15-6 Are all shared resources (e.g., file shares) which are not required for the intended use of the device disabled?
   Yes __
15-7 Are all communication ports which are not required for the intended use of the device closed/disabled?
   See Note 1
15-8 Are all services (e.g., telnet, file transfer protocol [FTP], internet information server [IIS], etc.), which are not required for the intended use of the device deleted/disabled?
   See Note 1
15-9 Are all applications (COTS applications as well as OS-included applications, e.g., MS Internet Explorer, etc.) which are not required for the intended use of the device deleted/disabled?
   See Note 1
15-10 Can the device boot from uncontrolled or removable media (i.e., a source other than an internal drive or memory component)?
   See Note 1
15-11 Can software or hardware not authorized by the device manufacturer be installed on the device without the use of tools?
   Yes __
   1) Yes, sites can disable

SAHD notes:

16 SECURITY GUIDANCE (SGUD)
The availability of security guidance for operator and administrator of the system and manufacturer sales and service.
16-1 Are security-related features documented for the device user?
   Yes __
16-2 Are instructions available for device/media sanitization (i.e., instructions for how to achieve the permanent deletion of personal or other sensitive data)?
   No __

SGUD notes:
## Other Security Considerations (OTH)

**Additional security considerations/notes regarding medical device security.**

| 20-1 | Can the device be serviced remotely? | No |
| 20-2 | Can the device restrict remote access to/from specified devices or users or network locations (e.g., specific IP addresses)? | Yes |
| 20-2.1 | Can the device be configured to require the local user to accept or initiate remote access? | Yes |

## Transmission Confidentiality (TXCF)

The ability of the device to ensure the confidentiality of transmitted private data.

| 18-1 | Can private data be transmitted only via a point-to-point dedicated cable? | Yes |
| 18-2 | Is private data encrypted prior to transmission via a network or removable media? (If yes, indicate in the notes which encryption standard is implemented.) | No |
| 18-3 | Is private data transmission restricted to a fixed list of network destinations? | Yes |

## Transmission Integrity (TXIG)

The ability of the device to ensure the integrity of transmitted private data.

| 19-1 | Does the device support any mechanism intended to ensure data is not modified during transmission? (If yes, describe in the notes section how this is achieved.) | No |

## Health Data Storage Confidentiality (STCF)

The ability of the device to ensure unauthorized access does not compromise the integrity and confidentiality of private data stored on device or removable media.

| 17-1 | Can the device encrypt data at rest? | No |

## Transmission Security Considerations (OTHR)

Additional security considerations/notes regarding medical device security.

- Device Model: Insight, Insight2, Insight FD
- Software Revision: 1.x, 2.x, 3.x, 4.x, 5.x, and 6.x
