

Exceptional Service and Support

HOLOGIC Mammography systems and service ranks #1 in 2017 and 2016

For two years in a row, HOLOGIC received top scores from customers on the IMV ServiceTrak survey.

For over 20 years, IMV has conducted its annual Service Trak customer satisfaction survey on the medical imaging industry. Customers rate manufacturers on various system and service performance factors and satisfaction.

In the latest survey for 2017 and for 2016, Hologic ranks #1 in twenty-two performance and satisfaction factors for mammography systems and service.

Unparalleled system performance

The IMV results reflect Hologic's commitment to insight driven innovation, diagnostic leadership and product quality in women's healthcare. Customers rank Hologic first in overall manufacturer performance, system performance, probability of repurchase, technology leadership, image quality, ease of use, reliability and system up-time to name a few.

In short, Hologic offers unparalleled system and diagnostic performance in mammography.

Exceptional service and support

A dedicated focus on mammography is one of the reasons Hologic service is #1. Unlike other companies whose service teams provide multi-vendor and multi-modality support, the Hologic team is singularly focused on providing our mammography customers with the highest uptime, performance and satisfaction in the industry.

From installation to training to on-going system service, our field service engineers and applications specialists deliver exceptional service and support as supported by the 2016 and 2017 IMV results.

Only Hologic ranks first in these performance and satisfaction areas in the 2017 and 2016 IMV ServiceTrak survey for Mammography.
