For In Vitro Diagnostic Use Only
Store at room temperature (15° to 30°C / 59° to 86°F).
Do not freeze.

For Professional Use Only
The Hologic TLiIQ QCette® is a quality control device used to monitor the performance of the TLiIQ® Analyzer.

INTENDED USE
The TLiIQ QCette is a quality control device used to verify that the TLiIQ Analyzer performs within specification. The QCette Setup software determines a value for the QCette. Daily quality control data collected from the QCette are automatically compared to this setup value to verify analyzer performance.

PRECAUTIONS AND WARNINGS
1. For in vitro diagnostic use only.
2. Do not use the QCette if it is damaged.

STORAGE AND STABILITY
The QCette should be stored at room temperature (15° to 30°C / 59° to 86°F) in the container provided. Do not store in the cassette insertion site of the analyzer. Do not use the QCette unless it is clean and free of lint or moisture. If properly stored, the QCette should last an indefinite period of time.

MATERIALS REQUIRED BUT NOT PROVIDED
TLiIQ Analyzer, Printer, and User Manual

PROCEDURE
Initial TLiIQ QCette Setup
Note: Setup is performed once for the QCette received with the TLiIQ System.
1. From the Main Menu, select CHANGE SETUP.
2. Select QCette SETUP from the SETUP menu and enter the information requested until the analyzer prompts to insert QCette. Insert QCette and press enter. Setup of the QCette will take approximately 15 minutes.
3. Upon completion, the analyzer will display either SETUP COMPLETE or SETUP ERROR. Setup Error indicates that the performance criteria of the analyzer have not been established. See the TLiIQ System User Manual for details.

Daily TLiIQ QCette Use
Note: Daily running of the QCette is a quality control method for analyzer performance.
1. From the Main Menu, select DAILY QC.
2. Enter the information requested until the analyzer prompts to insert QCette. Insert QCette and press enter. Analysis of the QCette will take approximately 2–3 minutes.
3. The result for the QCette will be displayed on the analyzer display screen and automatically printed as SYSTEM PASS, SYSTEM FAIL, or INVALID.
INTERPRETATION OF RESULTS

The TLiIQ QCette is a daily quality control test to verify that the performance of the TLiIQ Analyzer is within specification.

The TLiIQ QCette is a Rapid fFN Cassette replica, containing a membrane with printed test and control lines, which is read by the TLiIQ Analyzer. Three different levels of response are measured with this QC device:

1. **High Level:** The blue line at the procedural control position, which is in the high positive range, must be above a minimum threshold value for QC to pass.

2. **Low Level:** The blue printed line at the test line position is in the cutoff range. This line is measured and compared with a value established during instrument setup and must be within 5% of that value for QC to pass.

3. **Negative:** The white space between the blue lines is measured and should always be in the negative range for QC to pass.

A “PASS” result indicates that the daily QCette value is within the specification determined at setup. A “FAIL” result indicates that the daily QCette value is outside the specification determined at setup.

If the QCette fails, ensure that it is clean and free of lint or moisture, and repeat the test. If there is dirt or lint on the QCette, a “canned air” product may be used. If the problem persists, see the TLiIQ System User Manual for further details, or contact Hologic for technical assistance.

QUALITY CONTROL PROCEDURES

Current Good Laboratory Practice includes the periodic use of controls to monitor assay performance. The QCette is recommended for use in monitoring the performance of the analyzer. The recommended frequency of use of the QCette is at least once every 24 hours, or whenever there is uncertainty about the analyzer. Do not run test patient samples until an acceptable result is obtained from the QCette.
