

In recognition of Sexually Transmitted Infection (STI) Awareness Month, we are reaffirming our shared commitment to providing comprehensive testing services to prevent the spread of infections and protect sexual health.

Our commitment aligns to the **Continuum of Care**— a reminder that fighting STIs is not a single step, but an ongoing continuum throughout a lifetime. Sexual health isn't a one-time event, but a continuum across different life stages that includes: awareness, screening, addressing symptoms, getting treatment, retesting per guidelines, and protection.

Thank you for your continued partnership as we recognize STI Awareness Month and work together to instill confidence in diagnostic decisions and enable accurate diagnosis. Below are lab and healthcare provider (HCP) initiatives that have been created to raise awareness about the critical importance of STI testing.

Jane Schwebke, MD*

STI Co-Infection Analysis

Watch this on-demand webinar with Dr. Jane Schwebke* to learn about STI co-infection with vaginitis. This webinar reviews recently published literature and study data that highlights STI distribution among women with symptoms of vaginitis, single and multiple infection rates in women with vaginitis, and STI prevalence of women with clinician and lab diagnosed bacterial vaginosis.

Kyle Bukowski, MD, FACOG,
Medical Director for the
Diagnostics Division of Hologic

Optimize STI Testing with Vaginal Swab Samples

Clinical laboratories can play a more prominent role in educating HCPs, including provider groups, on the advantages of using vaginal swabs for STI testing. Read this article by Dr. Kyle Bukowski to learn about what approaches laboratory professionals can take with HCPs in the use of vaginal swabs.

Opt-Out Screening for STIs: A Key Strategy for Protecting Long-Term Patient Health

Read this article by Dr. Tonya Chaffee* to learn how the CDC updated the STI guidelines recommending that HCPs consider chlamydia (CT) and gonorrhea (NG) screening for all women aged 15-24— regardless of reported sexual behavior. By implementing an opt-out screening approach for CT and NG, HCPs can create consistent opportunities to educate patients about the importance of understanding their sexual health.
