Note 8 Section 5.1. ALOF AC-12 None Is the length of inactivity time before autologoff/screen lock user or administrator ALOF-2 configurable? Yes Note 8 Section 5.1, ALOF AC-11 A.11.2.8, A.11.2.9 IEC TR 80001-2-2:2012 NIST SP 800-53 Rev. 4 ISO 27002:2013 **AUDIT CONTROLS (AUDT)** The ability to reliably audit activity on the device. Can the medical device create additional audit logs A.5.1.1, A.5.1.2, A.6.1.1, AUDT-1 or reports beyond standard operating system logs? Yes Section 5.2. AUDT AU-1 A.12.1.1. A.18.1.1. A.18.2.2 AUDT-1.1 Does the audit log record a USER ID? Does other personally identifiable information exist Section 5.2, AUDT AUDT-1.2 in the audit trail? AU-2 None Are events recorded in an audit log? If yes, indicate which of the following events are recorded in the AUDT-2 audit log: Section 5.2, AUDT AU-2 None Yes AUDT-2.1 Successful login/logout attempts? Yes Section 5.2, AUDT AU-2 None AUDT-2.2 Unsuccessful login/logout attempts? Yes Section 5.2, AUDT AU-2 None Section 5.2, AUDT AUDT-2.3 Modification of user privileges? Yes AU-2 None AUDT-2.4 Creation/modification/deletion of users? Yes Section 5.2, AUDT AU-2 None Presentation of clinical or PII data (e.g. display, AUDT-2.5 print)? Section 5.2, AUDT AU-2 None Yes Creation/modification/deletion of data? Section 5.2, AUDT AU-2 None AUDT-2.6 Import/export of data from removable media (e.g. AUDT-2.7 USB drive, external hard drive, DVD)? Section 5.2, AUDT AU-2 Yes None Receipt/transmission of data or commands over a network or point-to-point connection? AUDT-2.8 Section 5.2. AUDT AU-2 Yes None Remote or on-site support? Section 5.2, AUDT AU-2 AUDT-2.8.1 Yes Application Programming Interface (API) and similar AUDT-2.8.2 activity? N/A Section 5.2, AUDT AU-2 None AUDT-2.9 Emergency access? N/A Section 5.2, AUDT AU-2 None AUDT-2.10 Other events (e.g., software updates)? Yes Note 10 Section 5.2, AUDT AU-2 None AUDT-2.11 Is the audit capability documented in more detail? Section 5.2, AUDT AU-2 None Can the owner/operator define or select which AUDT-3 events are recorded in the audit log? Section 5.2, AUDT AU-2 None Is a list of data attributes that are captured in the Available upon request. AUDT-4 audit log for an event available? Section 5.2. AUDT AU-2 None Yes Section 5.2, AUDT AUDT-4.1 Does the audit log record date/time? Yes Note 12 AU-2 None Can date and time be synchronized by Network Time AUDT-4.1.1 Protocol (NTP) or equivalent time source? Section 5.2, AUDT AU-2 Note 13 None AUDT-5 Can audit log content be exported? Section 5.2. AUDT AU-2 Yes None AUDT-5.1 Via physical media? Yes Via IHE Audit Trail and Node Authentication (ATNA) AUDT-5.2 profile to SIEM? Via Other communications (e.g., external service AUDT-5.3 device, mobile applications)? Yes Note 14 Are audit logs encrypted in transit or on storage

NONE

Notes:

Device contains a limited amount of ePHI to identify images - typically a name, date of birth, patient ID,

Note 1 and accession number.

Patient procedures may be deleted by privileged users on demand and/or automatically by product application reclaimer. Reclaimer times and

Note 2 thresholds configurable.

Database encrypted with Microsoft Always

Note 3 Encrypted technology.

Dimensions 1.10 & 3Dimensions 2.1 RD-04059 Rev 001 18-Dec-2020 Hologic, Inc. Note 4 Optional printing of patient images. Optional importing and exporting of patient Note 5 procedures. Typically an RJ45 Ethernet connection. Note 7 Product application defaults to automatically logging out current user after 15 minutes of inactivity. Inactivity timeout configurable. Note 8 Software installation and updates are logged. Note 10 Log date/time stamp based on current Windows Note 12 date/time for the system. Note 13 Windows can be configured with an NTP server. Can be exported and downloaded by remote or local service users via the product Service Tools web Note 14 application. Audit and application log files encrypted. Application Note 15 log files also have PHI one-way hashed. Note 16 User login with password and/or fingerprint scanner. It's strongly recommend to limit policy changes pushed to the device to User related policies only, such as password complexity requirements, forcing passwords to expire, etc. There are certain policy changes that, if pushed, could negatively impact the product application. Note 17 Strongly recommend configuring the product in its own Organizational Unit and limiting policy changes Note 18 pushed to the system. See product support website for list of validated security patches. Validation of latest security patches performed at regular intervals for the Note 19 product. Microsoft Windows Defender enabled by default. Option available to install validated CoTS antimalware products. See product support website for list of validated antimalware software solutions and installation guidance. Malware definitions can be updated by customer at will. Hologic suggests keeping antimalware software version at the same Note 21 major version as what was validated. Validated security patches for the product are posted to the product support website at regular Note 22 intervals. Vulnerability assessments, leveraging industry standard tools, and Windows security patch Note 23 validation occur at regular intervals. Hologic strives to evaluate and test Windows security updates for the product as they're released Note 24 (typically monthly). Software databases and configurations are automatically backed up at regular intervals. Patient studies should be stored to long term storage or Note 25 exported to external media by the customer.

Product not designed for long term storage. Patient studies should be stored to long term storage.

Note 26

Dimensions 1.10 & RD-04059 Rev 001 3Dimensions 2.1 18-Dec-2020 Hologic, Inc.

See antimalware software installation guide on product support website for required scan Note 27 exemptions and configurations.

> By default, product operates as a Kiosk with Windows taskbar notifications disabled/suppressed as to not interfere with product application use. Configurations can be modified upon request. CoTS antimalware products often provide a manager that allows for email alerts and notifications to the

Note 28 appropriate personnel.

Note 30

Note 31

Note 37

Note 39

Note 41

Windows Defender and approved CoTS antimalware Note 29 software typically have a history feature and/or log.

> Windows Firewall enabled and configured to allow product application network traffic. Patient data only sent to configured DICOM devices.

Hologic Connect leverages an encrypted TLS tunnel for remote Service connectivity. TLS can, optionally, be configured for the product Service Tools configuration web application. External network traffic can also be blocked for Service Tools. Patient study transmission to external devices is done using DICOM, without TLS. Customer may configure TLS at the network layer.

Use of unique product accounts is the decision of the customer. Generic accounts (i.e. PACS Admin) can be

Note 32 removed.

Enabled by default, locking the user for 15 minutes

Note 33 after 3 failed logon attempts.

> Configured by default to require complex passwords, by Microsoft standards, with a minimum length of 8 characters. Configurable by customer.

Note 34 Passwords not configured to automatically expire by

default. Configurable by customer. Note 35 Fingerprint scanner for product application login

Note 36 available for some configurations.

Product application leverages Windows Operating System for user authentication, Credentials not stored in application databases. Credentials stored/managed securely via Operating System. SBOM reviewed and updated as required during product update cycles.

Product application performs integrity check of all static binary files during startup. Application libraries

Note 40 leverage .NET code signing.

> Software update install packages include integrity checks for all packaged files. Integrity check automatically performed during installations. Product utilizes role-based privileges for many sensitive areas of the application. For example, a privileged user (i.e Tech Manager) is required to

Note 42 delete patient procedures. Dimensions 1.10 &

3Dimensions 2.1 RD-04059 Rev 001 Hologic, Inc.

Default product application users can be removed. Windows Administrator and Guest account renamed

and disabled. Note 43

Note 44

Service users require admin privileges for many of their responsibilities. Customer may customize those privileges or disable service accounts to restrict access, but should communicate these changes to their service representative. Implementing service user restrictions requires customers to provide access as needed for servicing the product. Can be configured, not restricted by default. If configured, communicate change to service

Note 45 representative. Hardware installation would require tools, software

Note 46 would require OS authentication.

> Hologic has hardened the product against DISA STIG guidelines and vulnerability assessments. Additional hardening or concerns may be discussed with Hologic. Implementing additional hardening changes may negatively impact the product.

Note 47 Security documentation available on product

Note 48 support website.

> Product user manual contains details for deleting patient studies as a privileged application user. For permanent deletion of all sensitive data, contact

Note 49

Sensitive PII stored to disk and/or the product databases are encrypted with AES 256. PII stored to application logs are both encrypted and one-way

Note 50 hashed.

Changes to encryption keys should be done at time of installation and can be modified upon request. Note 51 Exporting patient studies to removable media has an option for de-identifying. Network transmission is typically over standard DICOM and can be encrypted

Note 52 at the network level.

> Remote configuration of product via Service Tools web application. Ability to push approved software

changes over Hologic Connect. Note 53

18-Dec-2020

## Software Bill of Materials (SBoM)

| Component Name                      | Developer                     | Version(s)      | Product Use  |
